PRODUCT!**

**DIRECT REPLACEMENT BRUSHLESS SERVOMOTORS FOR:  
KOLLMORGEN BR-310X  
PARKER MPM142XX**

Potomac Electric introduces a new generation of high performance servomotors designed to directly replace 5" and 6" AC brushless motors popular in the late 1980s and 90s.

Potomac Electric's new BMR51XX series motor family features state of the art electrical and mechanical design, rugged construction and compact size.

BMR51XX directly replaces obsolete servomotors made by manufacturers such as Kollmorgen (now a division of Danaher), Custom Servomotors Inc. (now Parker), Electrocraft and several others.

BMR51XX motors work flawlessly with BD3 and BD4 Kollmorgen drives. Potomac Electric offers the motor with various shaft and mating plate combinations, resolvers, encoders and brakes.

Potomac Electric also supports the repair of all Danaher, Electrocraft and Parker products including both motors and drive electronics.
